

Climate Change Position Statement

The potential effects of climate change are a key challenge for business. The volume of greenhouse gases emitted to the atmosphere is continuing to increase, causing our planet to get warmer. These increased temperatures are contributing to rising sea levels, increased frequency of extreme weather conditions and droughts.

Innospec's strategy is to support the wider contributions being made to mitigate climate change by;

- Monitoring, measurement and reporting of our GHG and energy data.
- Continuing to have environmental consideration as a priority in our ESG strategy, with a specific objective to further reduce energy consumption and associated GHG emissions.
- The on-going development of innovative products that reduce emissions and other environmental impact when used by our customers.
- Working with our suppliers and customers to source sustainable, renewable raw materials.
- Improving the resilience of our facilities to possible climate change impacts to protect our employees and assets as well as enhance business continuity.

We report progress against our objectives in our annual ESG Report which is available on our web site www.Innospec.com.
